#### (iii) Analysis of gross amount of loans and advances to customers by geographical segments

(a) Gross amount of loans and advances to customers by major countries or geographical areas

The following geographical analysis of gross loans and advances to customers is classified in accordance with the location of the counterparties after taking into account the transfer of risk in respect of such loans and advances where appropriate. In general, such transfer of risk takes place if the loans or advances of a customer are guaranteed by a party in a country, which is different from that of the customer. A country or geographical segment, to which not less than 10% of the Branch's total amount of loans and advances to customers are attributable after taking into account any recognized risk transfer, is disclosed below:

		As at	As at
		31 Dec 2019	30 Jun 2019
		HK\$'000	HK\$'000
Hong Kong		7,024,040	8,167,644

(b) Impaired loans and advance to customers by countries or geographical area

### LIQA - Liquidity Risk Management

#### a. Governance of liquidity risk management

The management of liquidity risk within O-Bank is undertaken within a formal governance structure. The Board is ultimately responsible for the liquidity risk, which includes establishing the liquidity risk tolerance, the liquidity risk appetite and strategy, and ensuring that it is clearly articulated and communicated to all levels of management.

The Asset and Liability Management Committee (ALCO) is chaired by the Chief Executive Officer. Its members include Chief Strategy Officer, Chief Finance Markets Officer, Chief Corporate Banking Officer, Chief Retail Banking Officer, Chief Operating Officer and Chief Risk Officer. ALCO is responsible for reviewing liquidity management policies/liquidity risk management and limits to be proposed to the Board, and ensuring that these policies and limits are cascaded to the business unit and properly monitored by Treasury and Risk departments/Risk management department.

The Treasury department has the overall responsibility for the daily management of the Bank's funding and liquidity positions, and liquidity limits within the Board's approved limits.

Risk management department (including the Branch) is responsible for planning, measuring, and monitoring and mitigating liquidity risk. Risk management department should report to ALCO and the Board periodically and whenever/wherever necessary, so that they are aware of the situation of the Hong Kong liquidity risk exposure.

Operation department of the Branch is responsible for submitting all regulatory liquidity risk management returns to the HKMA in accordance to HKMA regulations.

O-Bank has established various liquidity risk monitoring targets (e.g. LMR and CNMM). These various target limits are established in consideration of regulatory requirements, funding needs and the overall business strategies of the Bank.

The Branch has adopted the liquidity maintenance ratio (LMR) requirement in accordance with Banking (Liquidity) Rules starting 1 January 2015 onwards and complies with the minimum requirement of 25% as stipulated by the Hong Kong Monetary Authority (HKMA). On daily basis, the Branch's Finance team calculates the liquidity maintenance ratio, in accordance with the Banking Ordinance, and reports to Treasury department and Risk management department. The Branch also performs cash flow projections and stress testing to identify liquidity risk exposures and possible impact on monthly basis.

#### b. Funding strategy

Treasury department plans its cash flow and monitors closely every business transaction to ensure that available funds are sufficient to meet business requirements at all times.

In terms of day-to-day liquidity management, Treasury department ensures sufficient funding to meet its intraday payments and all settlement obligations on a timely basis.

The process of managing liquidity risk includes:

- Maintaining sufficient amounts as unencumbered high quality liquidity buffer a protection against any unforeseen interruptions to cash flow;
- Managing short-term and long-term cash flows via maturity mismatch report and various indicators;
- Monitoring depositor concentration at Bank level to avoid undue reliance on large fund providers;
- Diversifying funding sources to ensure proper funding mix;

Forward looking liquidity mechanism is in place to promote efficient and effective cash flow management while avoiding excessive concentration of funding. Derivatives instruments such as interest rate swaps and cross currency swaps are used to manage and hedge market risk exposures against fluctuation in interest rates and foreign exchange.

#### c. Liquidity risk mitigation techniques

O-Bank's strategy is to mitigate liquidity risk through the prudent implementation of various risk mitigation techniques such as:

#### - Holding high-quality liquid assets:

O-bank maintains a sufficient high-quality liquefiable assets portfolio. The portfolio mainly includes cash, government bonds and other high-quality liquefiable assets, denominated in multiple currencies and with different maturities. The size of the portfolio is determined by the size of the stress outflows and in full compliance with regulatory guidelines, ensuring that the Group is able to meet its obligations as they fall due even in the event of a sudden and potentially protracted increase in net cash outflows.

#### - Diversification of funding sources:

Through implementing strategies to diversify funding sources across entities and on different maturities.

#### - Increase Market access:

The Group has lines of credit in place that it can access to meet liquidity needs.

#### d. Liquidity stress testing

The liquidity stress tests in considerations of actual and potential factors assess the outflows of funding under a range of scenarios. Based on these needs, the Bank will determine the size of the liquidity buffer that is required to meet anticipated outflows when a stress occurs. If the result of stress tests reaches the alert limit, ALCO will discuss the action plan to prepare in advance.

#### e. Contingency funding plan

O-Bank maintains a contingency funding plan that details how liquidity stress events of varying severity would be managed. As the precise nature of any stress event cannot be predicted, the plan is designed to provide a menu of options that could be used as appropriate at the time. The plan is part of the liquidity risk policy approved by the board of directors. ALCO monitors early warning indicators for potential liquidity risk and would activate the contingency funding plan as and when appropriate.

#### Additional quantitative disclosures

#### f. Liquidity gap

HKD in thousand

					11171	) III tilousullu
	Less than 8 days	8 - 30 days	31 - 90 days	91 - 180 days	181 - 360 days	Over 1 years
Assets	2,433,533	4,896,972	3,824,395	791,090	868,155	3,936,812
Liabilities	1,584,296	4,403,498	7,378,863	1,728,471	427,684	1,113,953
Off Balance Sheet Commitments	6,876	22,593	58,938	88,407	176,813	766,389
Liquidity Gap	842,361	470,881	-3,613,406	-1,025,788	263,658	2,056,470

O-bank monitors and measures its liquidity positions by using liquidity gaps for various buckets and in particular monitoring intraday positions. In the above table, cash inflows and outflows are bucketed based on contractual maturities, in which exposures with no maturity are slotted into over 1 year bucket. The liquidity gaps is managed by Treasury department and monitored by Risk management department.

#### g. Concentration limits on collateral pools and sources of funding

O-bank only accepts high quality liquidity assets (i.e. Level 1 assets) as collateral for lending with certain haircuts to ensure their credit quality and eliminate default risk.

O-bank does not impose hard limits on funding composition and concentrations, given the nature of funding mix in the Taiwan banking system and the Taiwanese banks in Hong Kong. They are the Bank's main counterparties of interbank lending and borrowing. However, soft limits are imposed on interbank borrowing line usage cap, deposit concentrations, and daily wholesale funding maturity concentration. These soft limits are cautiously managed by the Treasury department. Key measures are monthly reported prudently to ALCO.

## h. Liquidity exposures and funding needs at the level of the Branch, taking into account legal, regulatory and operational limitations on the transferability of liquidity

Funding needs of O-bank's foreign branch (now the Hong Kong Branch only), are determined and managed at the branch level. To ensure that O-bank supports the liquidity position of the Branch efficiently in times of stress events, it sets limits on lines of funding available to the Branch based on the budget, statutory requirements, and liquidity needs. These limits are reviewed on an annual basis and approved by ALCO.

#### VI. Liquidity

The Branch has adopted the liquidity maintenance ratio (LMR) requirement in accordance with Banking (Liquidity) Rules starting 1 January 2015 onwards and complies with the minimum requirement of 25% as stipulated by the Hong Kong Monetary Authority (HKMA).

Average LMR is calculated as the simple average of each month's average liquidity maintenance ratio for the financial year.

	For the period 1 Oct 2019	For the period 1 Oct 2018
	to 31 Dec 2019 <sup>1</sup>	to 31 Dec 2018 <sup>2</sup>
Average Liquidity Maintenance Ratio	58.72%	52.02%

<sup>&</sup>lt;sup>1</sup> The average LMR of financial year 2019 is calculated as the simple average of each month's average liquidity maintenance ratio of the fourth quarter of the financial year 2019.

HK Branch's ALCO is responsible for supervising the overall monitoring and control of the Branch's liquidity. Its members include Chief Executive, Head of Treasury Department, Head of Risk Management Department and Head of Operation Department. The management of liquidity is in compliance with the Branch's Liquidity Management Policy to ensure compliance with local regulatory requirements and limits set by Board of Directors.

On daily basis, Finance calculates the liquidity maintenance ratio, in accordance with the Banking Ordinance, and reports to Treasury Department and Risk Management Department. Liquidity risk is managed on a weekly basis by establishing liquidity risk management indicators and limits to identify, measure, monitor and control the liquidity risk. The Branch also performs cash flow projections and stress testing to identify liquidity risk exposures and possible impact on monthly basis.

<sup>&</sup>lt;sup>2</sup> The average LMR of financial year 2018 is calculated as the simple average of each month's average liquidity maintenance ratio of the fourth quarter of the financial year 2018.

#### VII. IFRS 16 "Lease"

IFRS 16 provides a comprehensive model for the identification of lease arrangements and their treatment in the financial statements of both lessee and lessor. It supersedes IAS 17 "Leases", IFRIC 4 "Determining whether an Arrangement contains a Lease", and a number of related interpretations.

#### Definition of a lease

Upon initial application of IFRS 16, the Group will elect to apply IFRS 16 only to contracts entered into (or changed) on or after January 1, 2019 in order to determine whether those contracts are, or contain, a lease. Contracts identified as containing a lease under IAS 17 and IFRIC 4 will not be reassessed and will be accounted for in accordance with the transitional provisions under IFRS 16.

#### The Bank as lessee

Upon initial application of IFRS 16, the Bank will recognize right-of-use assets, or investment properties if the right-of-use assets meet the definition of investment properties, and lease liabilities for all leases on the balance sheets except for those whose payments under low-value and short-term leases will be recognized as expenses on a straight-line basis. On the statements of comprehensive income, the Bank will present the depreciation expense charged on right-of-use assets separately from the interest expense accrued on lease liabilities; interest is computed using the effective interest method. On the statements of cash flows, cash payments for the principal portion of lease liabilities will be classified within financing activities; cash payments for the interest portion will be classified within operating activities. Currently, payments under operating lease contracts, including property interest qualified as investment properties, are recognized as expenses on a straight-line basis. Cash flows for operating leases are classified within operating activities on the statements of cash flows. Leased assets and finance lease payables are recognized for contracts classified as finance leases.

The Bank anticipates applying IFRS 16 retrospectively with the cumulative effect of the initial application of this standard recognized on January 1, 2019. Comparative information will not be restated.

The Bank expects to apply the following practical expedients:

Lease liabilities were recognized on January 1, 2019 for leases previously classified as operating leases under IAS 17. Lease liabilities were measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate on January 1, 2019. All right-of-use assets are measured at an amount equal to the lease liabilities, adjusted by the amount of any prepaid or accrued lease payments. Which is applied, the Bank applies IAS 36 to all right-of-use assets.

- a) The Bank will apply a single discount rate to a portfolio of leases with reasonably similar characteristics to measure lease liabilities.
- b) The Bank will account for those leases for which the lease term ends on or before December 31, 2019 as short-term leases.

For leases currently classified as finance leases under IAS 17, the carrying amounts of right-of-use assets and lease liabilities on January 1, 2019 will be determined as at the carrying amounts of the respective leased assets and finance lease payables as of December 31, 2018.

## Right-of-use assets
